

BPA/BPS Compliance Statement

Thermal Label & Receipt Products

Scope

This statement applies to the direct thermal label and receipt products manufactured or supplied by Jones Healthcare Group.

BPA/BPS Status Summary

Jones Healthcare Group does not intentionally add Bisphenol A (BPA) or Bisphenol S (BPS) to any direct thermal label or receipt products within this scope.

This determination is based on supplier declarations for the direct thermal face stocks used in these products, which confirm:

- BPA is not intentionally added to the thermal materials used in Jones Healthcare direct thermal labels.
- BPS is not intentionally used in the thermal coating formulations supplied to Jones Healthcare.
- One supplier notes that, due to shared equipment, trace residual BPS may be possible, although none is intentionally added.

Jones Healthcare Group does not conduct independent laboratory testing for BPA or BPS and relies on supplier certifications for material compliance.

Manufacturing Considerations

Jones Healthcare manufactures the majority of its direct thermal label products in-house and also works with qualified external manufacturing partners. All thermal label constructions use approved direct thermal face stocks sourced from suppliers who have provided declarations regarding BPA/BPS status. Jones Healthcare does not intentionally add BPA or BPS during any stage of label manufacturing or conversion.

Customer Guidance

This statement is provided to support customer regulatory, quality, and documentation requirements. Customers who require additional supporting documentation, such as supplier declarations, material certifications, or lot-specific details, may request these through their Jones representative.
